Certificate in Laser Therapy

Laser therapy is a medical treatment that uses focused light of specific wavelengths to stimulate tissue repair, cosmetic skin rejuvenation, pigmentation treatment, and hair removal.

Our dynamic certificate program in Laser Therapy aims to equip our students with the knowledge and skills required to perform various treatments including hair removal, skin rejuvenation, vascular treatments, and pigmented lesions. This program provides precautionary steps to avoid error, and the best methods to make the laser process as simple as can be. Students will be taught how to identify skin types, how to work the levels and various hand pieces of the laser machine, and how to perform various treatments.

The purpose of the Laser Therapy Certificate Program at S2M College is to understand the fundamentals and practicalities of the science of laser therapy. This is due to the procedure relating to patient care, and the dermatological anatomy of the human body. Upon successful completion of this course students will be able to:

- Identify the classification of the skin.
- Understand routine practices, and additional measures related to laser therapy.
- Practice the application of laser therapy.
- Understand patient consultation.
- Understand the theory of laser.
- Outline post-procedure care of the patient.
- List potential sources of error, and the prevention of such errors from occurring in practice.

This courses is open to all those who have a passion for medical cosmetic treatments, and would like to learn the theory and application of laser therapy.

Laser Course Highlights:

- 1- Introduction & Theory of Laser
